BA Brushed Aluminum

Unmatched Performance

Lumen output is specifiable within a wide range, independently, between direct and indirect distributions. Combined with a high-performance batwing distribution, this allows luminaires to be spaced further apart while maintaining uniformly lit surfaces and less luminaires to be used.

Advanced Dimming and Controls

Enhanced Dimming

The eldoLED driver delivers smooth and flicker-free deep dimming performance to dark. The dual circuit option allows you to control the indirect and direct illumination separately. Dual dimming provides the ability to create different moods in the space, increasing the design possibilities for your application.

eldoLED®

Tunable White

Tunable White brings exciting features previously reserved for niche applications to everyday lighting systems. Reproduce natural light patterns and colors, complement materials and support productivity with white light featuring CCT control.

nLight®

The nLight networked digital lighting control system is easy to use, easy to install and helps save energy. nLight easily scales from one room to an entire campus to provide a lighting control solution that's perfect for your space.

Warm Dimming

Warm Dimming taps into innate human expectation that light sources warm up as their intensity is reduced. Reminiscent of evening light, Warm Dimming dramatically impacts the ambiance of a space, evoking a more welcoming atmosphere.

nLight® AIR

nLight AIR is a simplified wireless lighting control solution for renovation projects. The solution is comprised of Acuity Brands LED fixtures with an embedded smart sensor and wireless battery powered nLight AIR wall switches. Start-up is streamlined with the CLAIRITY app.
