

## WSRA Series

Modern Design with High Performance

The WSRA wall switch occupancy sensor has a sleek modern design with the perfect feature set for light commercial and multi-family residential applications. With Passive Infrared Sensing (PIR) the WSRA provides quality sensing performance optimized for your space. The screwless wall plate design not only simplifies installation, but it also achieves a smooth clean finish.

### Aesthetic Appeal and Functional

The screwless wall plate achieves a polished, modern look without the hassle of a permanent snap on design and is available in white and ivory.

### Vacancy

Vacancy is a wonderful feature as the sensor will recognize when the room/space is unoccupied and after a specified length of time the lights will turn off.

### 2P Fan

The WSRA 2P FAN is a wall switch sensor with a Passive Infrared (PIR) occupancy sensor to control lighting and an exhaust fan all in one wall switch.

### Title 24

The WSRA wall switch occupancy aids in Title 24 code compliance.
