

eLINK RACK-MOUNT LIGHTING PROTOCOL ROUTER

Models shown: 1. PWELINK RM P2 RJ4SEC REAR

WARRANTY

3-year limited warranty. Complete warranty terms located at:
<https://www.acuitybrands.com/support/warranty>

NOTE

Actual performance may differ as a result of end-user environment and application. Specifications subject to change without notice.

Pathway Pro marked products are geared for advanced entertainment lighting system applications and are available only to authorized buyers.

eLink supports SixEye cloud-based remote management

OVERVIEW

The eLink is a PoE-enabled entertainment lighting Ethernet router designed to bridge two distinct Local Area Networks, capable of several functions where network isolation and security is a concern.

eLink has several applications including real-time DMX-over-Ethernet protocol conversion, allowing access to only certain DMX slots for a temporary/touring console, isolating lighting network data from console configuration traffic, and more.

As Ethernet data distribution in entertainment and architectural systems becomes more ubiquitous, tools are needed to ensure data from one system is not flooding the network causing unnecessary or unsecured traffic.

eLink aids in enforcing good network practices, making your networks cleaner, faster and more reliable.

FEATURES

- 2 locking RJ45 etherCON ports on rear (each on separate LANs)
- Primary Port supports 10/100/1000Base-T speeds and is PoE-enabled for powering the device
- Secondary Port supports 10/100Base-T speeds, typically connected to downstream network
- Convert Network DMX data from one of the following industry protocols to any other:
 - Pathway ssACN (Secure sACN)
 - E1.31 streaming ACN (sACN)
 - Art-Net
 - Pathport Protocol
 - ShowNet
- Primary Port can optionally loop back converted protocols on the main network when physical isolation of data is not needed for single-LAN systems
- Supports a matrix of 128 inputs by 16 outputs of Network DMX data simultaneously
- Pathport-style signal loss behaviors including Hold Last Look, Fade and Port Shutdown
- Front panel configuration of standard patches
- Pathscape configuration allows custom slot-by-slot patching, merging and prioritizing multiple control sources
- Dry Contact Closure interface can be configured to freeze output stream or cease data transmission
- Operates on Power-over-Ethernet (PoE) or auxiliary 24-48VDC input
- Includes 19" rack mounting kit

ORDERING INFORMATION

PWELINK			PWELINK RM P2 RJ4SEC REAR		
Series	Form Factor	Port Quantity	Port Type	Port Location	
PWELINK Pathway eLink Lighting Protocol Router	RM Rack-mount	P2 2 Ethernet Ports	RJ4SEC RJ45 etherCON Connector	REAR Ports on Rear Panel	

Accessories	
PWPWR WW BARL 24W 24VDC	Power Supply, Wallwart, Barrel, 24 Watts, 24 Volts DC
PWACC WMSM	Pathway Accessory, Small Rack-mount to Wall-mount kit
PWACC TMSM	Pathway Accessory, Small Rack-mount to Truss mount kit
PWACC EARS	Pathway Accessory, 19" Replacement Rackmount Ear Kit

SPECIFICATIONS

Electrical	Input Ratings	PoE Class 1 device 24-48VDC auxiliary power input 4.2W maximum power consumption Dry Contact Closure
	Regulatory Compliance	CE
Mechanical	Dimensions	8.6" W x 1.7" H x 7.0" D (218mm W x 43mm H x 178mm D)
	Weight	2.3 lbs (1 kg) [base device, without rack mounting hardware]
Environmental	Operating Temperature	32°F to 122°F (0°C to 50°C)
	Relative Humidity	5-95%, non-condensing
	Standard Compliance	RoHS 2011/65/EU + A1 2015/863
General	Compliance	ANSI E1.31 sACN - Streaming ACN IEEE 802.3af Power-over-Ethernet California Title 1.81.26, Security of Connected Devices
Government Procurement	BAA	Buy America(n) Act: Product qualifies as a domestic end product under the Buy American Act as implemented in the FAR and DFARS. Product also qualifies as manufactured in the United States under DOT Buy America regulations.
	BABA	Build America Buy America: Product qualifies as produced in the United States under the definitions of the Build America, Buy America Act. Please refer to www.acuitybrands.com/buy-american for additional information.

DIMENSIONS

EXAMPLE USE CASES

Guest Console Security On-Ramp

- Receive any supported protocol from third-party controller
- Add Security Domain data authentication
- Transmit ssACN (Pathway Secure sACN) to Pathports on the same Security Domain

Touring Access to House Light System

- Touring Act has their own data distribution to their own lights
- Venue makes available one port on the eLink for touring console
- Touring console is allocated a limited number of slots for house lights, step lights, cue lights and accent lighting
- eLink only allows through those limited slots and patches them to the necessary house circuits
- Regardless of how the touring console floods its own network, only the prescribed data slots and protocols arrive on the house system

Simple Real-time Protocol Conversion

- Receive any combination of Art-Net, Strand ShowNet, Pathport Protocol, E1.31 sACN or ssACN
- Re-transmit using any universe of the supported protocols
- May work across two LANs or loop back using just one

Complex Patching with Priority and HTP for simple 3rd party devices

- Add Pathport-like logic to simple devices that can only receive one universe, such as media servers
- Build custom slot-by-slot patching with multiple levels or priority and HTP rules
- Merge multiple controllers with defined rules to devices not capable of listening to more than one source at a time

Console On/Off Switch

- Using a simple contact closure, enable or disable the use of your network
- Choose Hold Last Look or cut data transmission altogether

Protocol and Network Filter

- Define the Secondary output protocol and patch
- All data on Primary side is isolated from downstream network
- Remove MANet, console configuration data, Dante, and Internet-related traffic from your DMX network

SixEye Remote Monitoring and Management

- Add eLink to monitor data presence and DMX levels from anywhere
- Remotely hold or shutdown data flow

sACN Priority Change

- Receive sACN from a device having default priority of 100
- Re-transmit sACN with a higher or lower priority
- Use a "Magic Channel" to change priority on the fly
- Use standard 1:1 patch or swap & drop some slots

APPLICATION RISER

Guest Console Security On-Ramp

Simple Real-time Protocol Conversion on one LAN with loop back
