

PRIM™

Recessed

Prim recessed aims to create quiet lines in spaces with its recessed lens 2" and 4" apertures. This changes the field of view from traditional linears and creates more of a linear downlight appeal for the designer. Our apertures are truly recessed, creating a 50-degree cutoff making ceilings quieter while maximizing the visual comfort for the occupants through the entire space.

The Prim recessed light fixture retains all the outstanding features of the pendant version, delivering exceptional performance throughout the entire space, regardless of how the product is applied. With the same aperture as Prim pendant, Prim recessed ensures seamless continuity.

Seamless for Harmony

With a clean minimalist appeal for recessed and linear pendants, Prim blends a recessed seamless lens with architectural trims creating a pristine aesthetic.

Quiet by Design

With thoughtful, purposeful intent, the components of a traditional downlight have been designed to minimize top-down flash and high-angle glare, providing a soft, even illumination.

Preserve the Flow

A choice between ribbed or smooth trim options and a host of colors. That, plus a choice of square or sculpted endcaps simplifies keeping the visual flow consistent throughout the space.

Recessed Ceiling Types

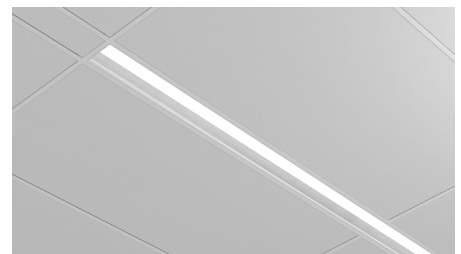

Available in three ceiling types: grid, flanged, and flangeless, offering versatile styling to suit any design preference.

Flangeless

Flanged

Grid
