DO NOT REMOVE PRIMARY FIXTURE LENS - ACCESSORY LENSES ARE PLACED BEHIND THE PRIMARY LENS.

1. Place the accessory lens behind the original lens.
2. Squeeze the tension ring slightly to reduce the diameter.
3. Slide the tension ring into the door assembly and push down until it is snug against the back of the accessory lens.

Consult your individual fixture spec sheets to show which accessory lenses are available with each model and how many can be installed in each fixture.
