Remote Transformers
Used with 12 volt fixtures

Transformers may be loaded to 100% capacity, however the recommended load range for optimal efficiency is 40-80%.

**Non-Isolated Transformers:** Suitable for use with landscape type lighting
Isolated Transformers: Suitable for use with underwater and landscape type lighting

</table>
15 watts, 12V ac to 120V, electronic
- Maximum remote distance is 10’.
- It is not recommended to dim below 7.5 volts or you may experience flickering.
- Dimmable only with MR16 by using electronic low voltage dimmer switch.
Non-Isolated
Suitable for MR16 and LED

60 and 75 watts 12V ac to 120V or 277V, electronic
- Dimmable to a minimum load of 20W for non-LED sources.
- Maximum remote distance is 10’.
- Dimmable only with MR16 by using electronic low voltage dimmer switch.
Non-Isolated
Suitable for MR16 and LED
stepdown transformers are two winding isolated type.
- Two separate wiring compartments isolate primary and secondary leads.
- Housed in weatherproof enclosure.
- Meets requirements of article 680 N.E.C. Listed by U.L.

300 watt, 60LED watt
A combination junction box and transformer box
- box includes a junction box, transformer housing, and anti-wicking chamber to prevent water being drawn from the conduit into the transformer housing.
- completely pre-wired with interconnecting leads which are terminated and imbedded in high temperature sealing compound to prevent wicking.
- M300 watt 120 or 277 volt can be used with Incandescent low volt and LED low volt ac only
- 60LED watt MVOLT can be used with 12v dc only
- M300 Dimmable using low voltage magnetic dimmer switch
- 60LED dimmable with LDIM only 0-10v, by using a 0-10v dimmer switch
Suitable for MR16 and LED
Non-Isolated
